

End of Day (EOD) Report

Date: 9th July, 2026

Name: M. Abdullah Asim

Accomplishments

- Look up and understand VLANs, VPNs, firewalls, HTTP/HTTPS, and SSH protocols.
- Revised some Python programming fundamentals.
- Install Cisco Packet Tracer and relearn how to build an operational mini routed/switched network topology.
- Successfully created a mini SIEM platform powered by Wazuh with a visual dashboard.
- Added a Wazuh agent to a windows VM endpoint for event monitoring.
- Performed research on server forensics and what it involves in operation.

Challenges

- Performing configuration and setting rules for the mini SIEM platform. Essentially trying to enhance the platform for better security monitoring over the base product.
- Ran into storage issues on Ubuntu VM for the mini SIEM platform which I solved by expanding the virtual storage.

What's Next

- Extend upon the mini SIEM project:
- Develop/add a feature to use the platform to communicate activity from an endpoint with an integrated Wazuh agent (like a server) in a more natural language for easy and quick convenience. Like implementing an AI model.

Status

Completed today's roadmap tasks. Created the base mini SIEM system, now to work on the extended feature for the platform's ease of use.

Regards,

M. Abdullah Asim
