

End of Day (EOD) Report

Date: 22nd-23rd July, 2026

Name: M. Abdullah Asim

Accomplishments

- Visit the SOC office and NOC office to gain understanding of the organization's network infrastructure.
- Learn about the network layout, setup and rules implementation across the organization.
- Learn about how system auditing is performed for compromised systems in case of a breach. And how the discoveries help to improve security systems.
- Create a new Ubuntu VM and setup a OpenCTI + MISP system.
- Do a quiz based on the 2nd week roadmap tasks.

Challenges

- OpenCTI would not boot due to some XTM-one services not running. Ended removing those services.
- Trying to establish a connection between MISP and OpenCTI for publishing events.

What's next

- Perform research on a case study for Chat GPT going rogue and launching an unprecedented cyber-attack.
- Integrate OpenAEV into the OpenCTI + MISP system.

Status

The OpenCTI + MISP system is up and running. But it needs some live data to be fed into its database. This is necessary before proceeding with integration of OpenAEV

Regards,

M. Abdullah Asim
