

End of Day (EOD) Report

Date: 28th & 29th July, 2026

Name: M. Abdullah Asim

Accomplishments

- Establish a connection between two Ubuntu VMs running OpenCTI and Wazuh.
- Complete integration of wazuh in OpenCTI and establish communication
- Create new rules for Wazuh for detecting malicious files, malicious activity on web applications, USB device detection, and network monitoring for malicious packets through Suricata.
- Add a Threatfox connector to OpenCTI for receiving live data feed for IoCs and malware.

Challenges

- Establishing connection between OpenCTI and Wazuh proved to be difficult due to network ports and DNS issues.
- The whole SOC system needs to be implemented for Windows server and Ubuntu. But I currently tested on a kali VM for now.

What's next

- Integration of system with windows server and Ubuntu server agents.
- Find more suitable connectors to feed more data to OpenCTI.

Status

The system is setup and configured. Now we just have to set up the agents, connect and configure them.

Regards,

M. Abdullah Asim
